```

#### Desktop App:

1. Google Authentication API: {"error": "GOOGLE\_CLIENT\_ID not configured"}, No endpoint found.
2. Error Logger: Not integrated
3. See the above image, when ever google auth tried/failed. It polls for 120 times blocking all other attempts, login and register. Taking a long time for 120 times.
4. Feedback should have a large window.
5. Feedback windows cursor is floating above the designated line.

#### Mobile App:

1. Error logging: Not implemented
2. Settings menu not present.
3. No option for password change.
4. No option for feedback.
